Healthy Eating, Active Living

Did you know?

A little CINNAMON goes a long way in spicing up your life...

- Improves blood sugar
- Lowers inflammation (swelling)
- Protects and repairs your body from damage

Try adding some cinnamon to different foods and beverages like:

PORRIDGE

COFFEE

Use Asian cinnamon varieties for added benefit.

Healthy Food Guidelines: Color Coding System

For simplicity, foods and beverages have been grouped into three distinct categories:

GO!: Everyday enjoy highly nutritious foods including: fresh and frozen vegetables, legumes, whole fruits, whole grains, seafood, lean meats, nuts, seeds, unsaturated oils, water, unsweetened teas and low fat dairy without added sugar.

SLOW!: Occasionally have foods with good nutritional value that are lightly processed, including: refined grains such as pretzels, bagels and breads, red meat, whole fat dairy, dried fruits and 100% juice. These “Slow” foods are higher in sugar, saturated fat, sodium or calories.

WHOA!: Rarely eat highly processed foods with low nutritional value, including: most desserts, salty or sugary snacks, chips, candy, syrups, energy drinks, alcohol, and sugar sweetened sodas. These “Whoa!” foods are usually very high in saturated fat, hydrogenated oils, added sugar and/or sodium.
