Additional Information: [The Medical Center and Family Medicine Residency](#)

The Medical Center is a modern, 413-bed tertiary care facility that provides a full range of diagnostic and treatment services. Over its 150 year history, The Medical Center has emerged as a leading provider of medical care in the West Central Georgia region surrounding Columbus. The Medical Center is operated as part of the Columbus Regional Healthcare System. Because of its affiliation, many healthcare resources are available to rural areas surrounding Columbus. In addition to The Medical Center, the Regional system is comprised of several primary not-for-profit community service corporations that include ambulatory care facilities, a foundation and two nursing homes adjacent to the campus. As the only training programs, our Family Medicine residents and interns receive tremendous hands-on experiences. The internship programs have been AOA approved since 1994. Our dually accredited Family Medicine residency program received three-year AOA approval in 2009.

Through the opportunities created by a diverse regional healthcare system, The Medical Center has developed into one of the best equipped, staffed and administered hospitals in the Southeast. Many services are offered here that are provided nowhere else in the region:

- Regional trauma center, perinatal center and high risk nursery for a 13-county area
- Largest regional provider of intensive care, with separate medical and surgical intensive care units totaling 32 ICU beds
- Regional pediatric intensive care unit
- Growing program of cardiovascular services and the area's only facility for pediatric cardiology
- The John B. Amos Cancer Center- a new multidisciplinary oncology facility
- Sleep studies laboratory
