B.S. in Public Health

Prepare for a career in public health, one of today's most in-demand health care fields. This unique undergraduate program integrates a health science core curriculum with progressive health care topics that affect both local and global populations. You'll gain a solid foundation in public health issues, practices, and applications through faculty-led instruction as well as experiential and interprofessional learning opportunities.

What You'll Study

As a student in the College of Osteopathic Medicine's (COM) public health program, you'll learn from faculty who share their expertise in areas including global health, social and behavioral health sciences, epidemiology, environmental and occupational health, and health care. The interprofessional experiences of our faculty will provide you with a real-world perspective on the benefits, rewards, and challenges of working in public health.

How You'll Learn More

Expand your understanding of public health through engaging activities, interactive lectures, local and global outreach opportunities, and guest speakers from the public health sector. Gain hands-on experience and engage with fellow students and COM faculty while advancing your skills. Become immersed in community-based public health settings through practicum experiences that reinforce the real-world applications of the methods, principles, and practices you learn in class. You can even join our faculty abroad to participate in global public health outreach opportunities.

Dual Admission Option

NSU's Dual Admission Program is the first in the U.S. to offer an accelerated, seven-year academic path from the B.S. in Public Health degree to the Doctor of Osteopathic Medicine degree (D.O.), in addition to the eight-year path.

Acceptance into this Dual Admission Program reserves your seat in priority status in NSU's D.O. degree program while you're successfully working toward your bachelor's degree in public health.
